GAIN Report Number: GT6008

Guatemala

Food and Agricultural Import Regulations and Standards

Country Report

2006

Approved by:

Steve Huete, Ag counselor U.S. Embassy

Prepared by:

Karla Tay, Agricultural Specialist

Report Highlights:

Updated on June 2006. Sections updated: Section I. Food Laws. The Food Control Section of the Ministry of Health, responsible for registering processed food products, has expedited the registration process for non-risk products, making it unnecessary to have a laboratory test prior to assigning a registration number. Products are issued a registration number and will be tested according to surveillance annual schedule per product category. A risk category by product table is provided. Section IX. Import Procedures. New tariffs and quotas under CAFTA are specified.

Includes PSD Changes: No Includes Trade Matrix: No Annual Report Guatemala [GT1] [GT]

GUATEMALA:

FOOD AND AGRICULTURAL IMPORT REGULATIONS AND STANDARDS

(FAIRS)

DISCLAIMER: The Office of Agricultural Affairs of the USDA/Foreign Agricultural Service in Guatemala City, Guatemala has prepared this report for U.S. exporters of domestic food and agricultural products. While every possible care has been taken in the preparation of this report, information provided may no longer be complete or precise as some import requirements are subject to frequent change. It is highly recommended that U.S. exporters ensure that all necessary customs clearance requirements have been verified with local authorities through your foreign importer before the sale conditions are finalized. FINAL IMPORT APPROVAL OF ANY PRODUCT IS ALWAYS SUBJECT TO THE RULES AND REGULATIONS AS INTERPRETED BY THE COUNTRY OF IMPORT AT THE TIME OF PRODUCT ENTRY.

IX. IMPORT PROCEDURES	
APPENDIX I. GOVERNMENT REGULATORY AGENCY CONTACTS	
APPENDIX II. OTHER IMPORT SPECIALIST CONTACTS	

I. FOOD LAWS

The Division of Registration and Control of Medicines and Foods of the Ministry of Health, here after referred to as Food Control, is the main authority for food products legally imported or manufactured in Guatemala. Government Decree # 45-79 established the Health Code, which regulates Food Control, in 1979. Title II Chapter Two of the Health Code refers to food products. Food Control, under authority of Ministerial Decree 969-99 (replaces Decree 132-85), is responsible for upholding food product norms set by the Guatemalan Ministry of Economy's Commission of Standards (COGUANOR). The Commission of Standards is governed by the Executive Advisory Committee, which is made up of representatives from the Ministry of Health, Ministry of Economy, Ministry of Labor, School of Engineers and Chambers of Agriculture, Industry and Commerce. COGUANOR will keep the mandate regarding voluntary standards, while a new commission to be assigned by the executive (Obligated Regulatory Commission) will set obligatory standards regarding processed food. Approved standards before December 17, 2005 will not be modified. The new standards commission will regulate those obligatory ones after December 17, 2005.

There are many specifications, rules, legislation and other requirements regulating food products. These requirements are quite complicated and often subject to different interpretations. However, there is a considerable lack of resources in Food Control to effectively enforce the Health Code. As a result, for example, some imported food products are marketed in Guatemala without a Spanish-language label, as the food law requires. This is changing and more importing companies are complying with the law in anticipation of stricter enforcement by the Ministry of Health. A retailer who violates the food laws as interpreted by Food Control can be fined up to half the value of the previous day's total sales. Furthermore, there have been situations where imports have had difficulty clearing customs when the labels have not been in Spanish.

In order to receive an import permit, all imported foods of animal or vegetable origin must comply with the following requirements: phytosanitary and/or sanitary certificate, certificate of origin, commercial invoice, free sale certificate, bill of lading, and a microbiological certificate for products of animal origin. The Unit of Norms and Regulations of the Ministry of Agriculture, Livestock and Food Security (MAGA) controls all of these requirements and issues the import permit. By the end of 2006, import procedures will be available on-line (http://www.maga.gob.gt/maga_portal/).

Product Registration is required for all packaged food products in Guatemala. Food Control is responsible for all registrations. Food Control issues a sanitary registration number after a laboratory test has been performed on high-risk products. This registration number is valid for five years and takes six weeks to obtain in the case of high-risk products such as meat, poultry, deli-meats, etc. In the case of non-risk products, it takes approximately 48 hours to obtain the registry number and laboratory tests will take place within routine surveillance, scheduled annually according to product category. If products don't comply with labeling standards or food safety parameters, importers will be notified as necessary. It is recommended that samples be sent prior to attempting an export of high-risk products in order to obtain a sanitary registry number. Those samples must include the ingredients composition and the commercialization package, including proper labeling. The following list describes the risk-category assigned to processed food products:

prepared with corn dough	

In addition to the laboratory analysis done to the product at the time of registration, for high-risk products, the law requires inspections at the point of entry, wholesale and retail levels for the wholesomeness of the product. Natural foods, non-processed foods, raw materials and food additives do not require registration. Also, there is no environmental legislation that affects the importation of food products. The cost of registration and analysis of a product is about US\$215, independent of the risk category.

The Sample Law outlined in article 37 of Ministerial Decree 969-99 strictly prohibits the importation of samples except for the sole purpose of registering the product. However, an agreement has been reached with USDA in which samples will be allowed to enter the country without requiring previous registration for the purpose of exhibition, special events and promotion. In order to enter these samples, the importer must provide Food Control a written request accompanied by a certificate of free sale. To avoid problems with samples, it is best not to send more than 2 samples of 200 g each, per product, for registration purposes. For exhibition, special events and promotion, Food Control will allow the import of 25-50 kg per product, tax-free.

Microbiological - The Government of Guatemala (GOG) has been demanding that a microbiological certificate accompany all animal and unprocessed products. A private lab can issue this or the production plant's own quality control lab. All the microbiological certificates that are not Federal documents must be stamped by a local chamber of commerce to be considered official. The GOG uses Codex Alimentarius to establish the

maximum levels of parasites or residues. Most plants in the US already have systems in place to measure this as part of their HACCP programs. It is just a matter of sending the most recent results. Exporters should make sure that the information is presented as parts/million, which is standard. US tolerance levels for Salmonella, E-coli and others are acceptable in Guatemala.

USDA has reached an agreement with the Guatemalan Ministry of Agriculture, Livestock and Food (MAGA), so that the FSIS certificate counts as the microbiological, the free sales and the sanitary certificates.

II. LABELING REQUIREMENTS

Labeling requirements are set by COGUANOR's labeling standard #34039. It sets 40 requirements with respect to the appearance of the label, what information should be on the label and that it must be written in Spanish. However, importers negotiated with COGUANOR and reached an agreement for a stick-on label to be used with the following information written in Spanish:

- 1. Product definition/description
- 2. Name of the product (This should be the official name as noted on the U.S. Certificate of free sale)
- 3. Physical characteristics, including ingredients (This has to be a qualitative composition, which was indicated in the back of the registration form). If this information is in English, please translate literally.
- 4. Net weight/volume
- 5. List of ingredients and additives and the percentage of total for each
- 6. Name, address and telephone number of Guatemalan distributor
- 7. Food Control registration number (D.G.S.S.-D.R.C.A. _____-Sanitary license obtained at a Center of Sanitation); the original license has to be presented. Approximate cost for each product: Q.1,650.00.
- 8. Expiration date
- 9. If applicable "Keep Frozen"
- 10. If applicable "Form of Preparation"

Sample of label:

Nombre del Producto: Puré para bebés; postre, sabor chocolate

Ingredientes: Harina de trigo, leche entera reconstruida,

azúcar, vitaminas, colorantes naturales, cocoa.

12 oz. Netas

Distribuidor: Importaciones Guatemala, S.A. Dirección: Avenida Las Estrellas, 0-01, Zona 24,

Guatemala, Ciudad

Teléfono: (502) 555-1212 y (502) 555-2121

D.G.S.S.-D.R.C.A. 123-456-789 Fecha de vencimiento: 31-02-02

III. PACKAGING AND CONTAINER REQUIREMENTS

Imported sample-size products, under current law, must comply with existing labeling laws. Bulk-packed food products do not require labeling, unless they are to be sold at the retail

level as an individual unit. Nutritional labeling in Guatemala is not required, but the special shelf-life requirements specify that the use-by date be printed on the package. However, there have been problems with distributors importing goods with the use-by date removed or already expired. The law on use-by date is ambiguous and leaves room for interpretation. U.S. exporters are strongly encouraged to not ship product with a nearby expiration date. This problem has led to poor relationships for more than one U.S. company. In addition, there have been situations where product came stamped with the manufactured date, and entry was rejected. The customs agent assumed the product had expired. If stamping a manufactured date is already part of a company's procedure, it is best to also add an expiration date to avoid problems.

IV. FOOD ADDITIVES REGULATIONS

COGUANOR maintains a list of additives that are permitted for use in food products. The Codex Alimentarius food additives list was used in creating the Guatemalan norm. However, all new additives accepted by the Codex are not automatically accepted by COGUANOR. COGUANOR requires a vote by the Executive Advisory Committee to add a new additive to the list. This process takes approximately six months, but it is extremely rare to have an ingredient that is permitted in Codex Alimentarius not be accepted by COGUANOR. Under the Central America Customs Union, efforts are being addressed to accept FDA additive standards for U.S. products.

V. PESTICIDES AND OTHER CONTAMINANTS

The Technical Directorate of Vegetable Health of MAGA, hereafter referred to as Vegetable Health, regulates pesticides. Vegetable Health was established by Government Decree # 43-74 and regulates all agriculturally related chemical use by authority of Ministerial decree 377-90. There are no Guatemalan standards for tolerance levels of pesticides in food products. The Government of Guatemala uses the tolerance-level standards developed by Codex Alimentarius. Vegetable Health maintains a list of pesticides that are not permitted in Guatemala. This list is based on standards set by the EPA, Codex Alimentarius and FAO, among others. All pesticides must be registered with Vegetable Health.

VI. OTHER REGULATIONS AND REQUIREMENTS

All packaged food products that are sold at the retail level need to be registered at Food Control. The requirements to register food products are as follows:

- 1. Application for registration of food products
- 2. Certificate of free sale
- 3. Receipt of payment for laboratory analysis (\$215.00)
- 4. Provide the applicable amount of samples
- 5. Example of label design as it will appear on the product
- 6. An authorized translator must translate all documents.
- 7. The importer or a Guatemalan legal representative of the exporter must do the registration.

There are a number of regulations for special food groups. Decree 66-83 regulates the commercialization of substitutes for maternal milk. Beer, wine and other liquors do not need a registration number. Products labeled as "diet" must be registered as medicinal

products. All products that apply for registration must be tested by LUCAM, the Ministry of Health's only laboratory. Product samples must be provided at time of registration.

VII. OTHER SPECIFIC STANDARDS

The Ministry of Agriculture requires that all food products of either plant or animal origin obtain a sanitary import certificate as provided in Government Decrees # 34-84 and 479-84. Decree 34-84 mandates that manufacturing facilities of products of animal origin must be inspected by Ministry officials at the expense of the importer prior to issuance of a sanitary import certificate. However, they have not been enforcing this regulation. According to the Ministry they will require visits if ever a situation arises that represents an increased health risk, such as a disease outbreak.

The requirements to obtain a sanitary import certificate from the Technical Director of Sanitary Inspection and Control of Food Products are as follow:

- 1. Complete an application for Sanitary Import Certificate, one application per product
- 2. Copy of the Articles of Incorporation
- 3. Certification of Registration of Incorporation
- 4. Appointment of legal representative
- 5. Copy of Commercial License
- 6. Sales Tax collection permit
- 7. Import & Export License from the Bank of Guatemala
- 8. Appointment of veterinarian as "Regente" and a note from this veterinarian accepting the position. This is a veterinarian who is on private contract to oversee food safety for this firm. The closest professional in the U.S. would be a Resident Veterinarian Inspector. He will be required to sign all import requests and is legally liable for any illnesses that are caused by these products.
- 9. Establish if place of origin of product meets sanitary conditions by making an official visit. This does not apply to U.S. product.

Prior to the first importation, Ministry of Agriculture officials will inspect the warehouse where the imported product is to be stored at importer's expense. If product is to be used in a processing plant, an environmental impact study must be carried out.

VIII. COPYRIGHTS AND/OR TRADEMARKS

Guatemalan Law includes the Intellectual Property Bill, which specifies that the brand or trademark must be registered in Guatemala. Trademarks and brand names should be registered at "Registro de la Propiedad Industrial" at the Ministry of Economy. The law protects known brands, so if they are already registered elsewhere, the parent company is given priority to register it here. However the law was not retroactive, so the person that registered it, owns any brand registered prior to October 2000. All product registrations can be contested in the Guatemalan court system. However, this process can be time consuming and costly. Guatemala, as a member of the WTO, has accepted the new Trade-Related Aspects of Intellectual Property Rights (TRIPS).

IX. IMPORT PROCEDURES

The Guatemalan Government introduced an automated electronic customs clearance system in 2001. This system has created some transparency in the procedure, but it has also

created problems. When the computer reads that the import product is of animal or plant origin, it will automatically require that the following documents accompany the entry application: bill of lading, phytosanitary or sanitary certificate, certificate of origin, free sale certificate, packing list, commercial invoice, microbiological certificate, and import permit. As previously mentioned, the FSIS export certificate is officially accepted for importing meat and poultry products. All documents must be originals. Below is the procedure to acquire the import certificate and the order in which to proceed.

- 1. The procedure will start at the Ministry of Agriculture. All imported products of animal or vegetable origin are inspected by the "ventanilla unica" from the Unit of Norms and Regulations. The documents required are: phytosanitary or sanitary certificate or FSIS export certificate (for meat & poultry products), commercial invoice, bill of lading, certificate of free sale, packing list, and certificate of origin. In most cases a microbiological certificate is also required. These may be copies, but in order to clear customs, the originals will be needed. An application form with the above mentioned forms must be submitted along with a fee of Q100 (about \$12.50) in order to receive an import permit. It is best to drop off applications before 10:00 am; if the shipment is perishable, the license will be ready for pick-up after 2:00 pm. For all regular shipments the license will be issued within 24 hours. This time frame usually holds if there are no problems with the documentation.
- 2. For processed foods and all products of animal origin, Norms and Regulations will require that the application be signed and stamped by Control de Alimentos (Food Control). This is done to verify that the product has a Sanitary Registration number. In addition, Food Control will also require a Free Sale Certificate in order to process the request. These certificates are generally issued by state health or agricultural departments, and state that the products are free for human consumption. For non-processed foods, Food Control will require a Sanitary Certificate. The application and certificates are received and issued in the offices of Food Control (5a. Avenida 13-27, Zona 9, Guatemala City), office hours from 07:30 a.m. to 3:00 p.m. from Monday to Friday.
- 3. Food Control and Norms and Regulations will authorize the import permit and the product will be inspected by Organismo Internacional Regional de Sanidad Agropecuaria (OIRSA). This is a regional inspection entity in Central America that has been delegated the responsibility of food safety by all the Central American countries. Whether the imported product comes by air, land or sea, inspectors from OIRSA will be on site to assure that the paper work is in order. Then, inspectors perform a visual inspection of the imported products in order to authorize release from customs. In order to clear OIRSA, the original documents must be presented.
- 4. After the import certificate has been issued, this document is provided with all the above-mentioned documents to the customs official. The importer then pays the duties to SAT (Superintendent of Tax Administration). This payment is done in the form of a deposit at either of the two banks that are approved, and the deposit slip becomes the proof of payment. After all this has been done, the shipment will be released. This final procedure is done at port of entry. There is still a possibility of a red or green light at the exit gate of the container. If a red light is received, there will be an additional review of both documentation and contents of container. If a green light is received, the container is allowed to leave the yard.

The clearing process is done electronically, however, at the final stage all the documentation needs to be handed over to the customs agent (in originals) so that the shipment is released.

It is important that all quantities in all of the documents match. If not, clearing customs will be a major problem. Do not add boxes to a container once the documentation has been totaled, and always make sure that the phytosanitary or sanitary certificate's total equals the exact amount on the invoice. If there is any discrepancy, the container will be held and clearance will be extremely difficult.

U.S. Exporters must always take into account that a tariff rate quota system still applies to various commodities, with a 5 to 20 year phase-out period under CAFTA. Following is a table for the CAFTA tariff/quotas. If you wish to look out for a particular product, you can visit www.fas.usda.gov/info/factsheets/CAFTA/overall021105a.html.

CAFTA TARIFFS/QUOTAS

PRODUCT	QUOTA (MT)	TARIFF (IN-QUOTA)	TARIFF (OUT-OF- QUOTA)	Phase-Out Period (Years)
White corn	20,400	0%	20%	More than 20
Yellow corn	525,000	0%	35%	10
Rice	54,600	0%	29.20%	15
Black beans (whole)	53	0%	20%	15
Pork meat	4,148	0%	15%	15
Beef meat (doesn't include special cuts)	1,060	0%	15%	15
Chicken leg quarters	21,810	0%	164.4%	15
Powder milk	400	0%	15%	20

APPENDIX I. GOVERNMENT REGULATORY AGENCY CONTACTS

Name: Licda. Gladys Arreola

Title: Jefe

Institution: Departamento de Regulación y Control de Alimentos

Address: 3 Calle final, 2-10 Zona 15. Valles de Vista Hermosa. Guatemala

Telefax: (502) 2369-8784 / 6

Name: Lic. Jose Felix Mendizabal Pinto

Title: Director

Institution: Dirección General de Regulación, Vigilancia y Control de la Salud

(Health Services General Office, Ministry of Public Health)

Address: 6 Avenida 3-45, Zona 11, 3 Nivel, Escuela de Enfermería, Guatemala

Tel/Fax: (502) 2475-4682

Name: Licda. Ebenora de Bonatte

Title: Directora

Institution: Laboratorio Unificado de Control de Alimentos y Medicament (LUCAM)

Address: Km. 22 Carretera al Pacífico, Bárcenas, Villa Nueva

Tel/Fax: (502) 6631-2013

Name: Lic. Gustavo Mendizábal

Title: Director

Institution: Unidad de Normas y Regulaciones/Ministerio de Agricultura Address: 7 Avenida 3-67 Zona 13, Guatemala City, Guatemala

Telephone: (502) 2475-3058 Fax: (502) 2475-3058

Name: Dr. Anibal Menéndez
Title: Director OIRSA-SEPA-SITC

Institution: Organismo Internacional Regional de Sanidad Agropecuaria

Address: 21 Avenida 3-12, Zona 15, Guatemala

Telephone: (502) 2369-5900 Fax: (502) 2334-0646

Name: Alvaro Aguilar Title: Minister

Institution: Ministry of Agriculture, Livestock and Food

Address: 7 Avenida 3-67 Zona 13, Guatemala Telephone: (502) 2332-4756 / 2362-4758
